

TN Services

Find out more about our consulting services and what we can offer you

> Our Consultant Code

At the heart of our TN services you will find your Thinking Networks consultant. As your project partner, your dedicated consultant will take the initiative to get things done. From your first meeting all the way to project completion, your consultant will stay by your side, providing support even after your software has been installed.

> Our Services

Our TN consultants not only provide technical support, but they also deliver expertise in a range of business areas, e.g. economics, project management, change management, etc.

Our consulting services include:

- Project management
- Model Design for Planning
- Technical realization
- Training and webinars

> Our Consulting Team

We'd like to introduce you to three of our consultants.

Manfred Richter
Managing Consultant

Kai Rordorf
Senior Consultant

Joachim Teichmann
Senior Consultant

Service Range Overview

> Project Management

Introducing a planning solution is a project that requires coordination. In addition to the controlling department, colleagues from IT and various other departments (sales, production, etc.) are involved in the project. We strive to take everyone's needs into consideration. We also have you covered when it comes to tracking project progress, providing regular oversight and feedback on content, priorities and workload.

> Modeling

Modeling is the main task in your planning project. The model lays out your business map, as well as the structure and dependencies of your enterprise data. It also defines your processes and data flows. With the experience gained from multiple planning projects, we will help you bring your project team together to develop the right model architecture for your business.

> Technical Realization

Once your project guidelines and the planning model have been set up, we will align our technology with your IT infrastructure. This involves data integration, as well as the seamless integration into the system environment. Throughout this process, we work closely with your IT department.

> Training

A trained eye sees more and works more efficiently. That's why we provide you with valuable training and workshops. To truly deliver "Self Service BI", we offer not only end-user training, but also training for power users who can't get enough of the nitty-gritty details of how the planning application works. You can also sign up for hands-on workshops about common topics, such as driver-based planning or project management.

> Webinars

Our consulting experts regularly offer free webinars. You are invited to attend, whether you are already a customer, or are simply interested in the topic.

> Customer Testimonial

„We appreciate the dedication and the business expertise of Thinking Networks' consultants. They made sure that our structural changes were quickly reflected in our reporting and consolidation.“

Klaus Reimer,
Project Director,
Corporate Information System
Beiersdorf
